Art Unit: 1742

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP57181354A (JP'354).

JP'354 discloses the invention substantially as claimed. JP'354 discloses a method of forming a Ni-Al alloy comprising:

providing a Ni-Al alloy powder;

adding a Ni powder to the Ni-Al powder to provide a mixture; and

sintering said mixture to form a Ni-Al alloy.

Art Unit: 1742

JP'354 discloses an amount of Ni added to the powder which falls into the ratio as claimed by Applicant establishing a prima facie case obviousness.

The Examiner notes that the preamble limitation to an anode to a fuel cell does not provide a limitation to the claim, the preamble limitation not supported by the body of the claim.
